DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 5-7, 9, and 15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

More specifically, these claims contain limitations defined by trademarks. This is improper because the generic formula or products that are identified by trademarks are subject to change. Thus the metes and bounds for which patent protection is being sought are not clearly defined. Applicants are required to specifically identify each component in the claims.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sage, Jr. 6,436,476 B1 in view of Yamada et al, 4,427,482 (Yamada).

Sage teaches reinforcing fibers coated with an aqueous dispersion of an epoxy urethane film former, further teaching that other additives and processing aids can be included, such as thickeners and acrylic polymers. Yamada teaches that fillers such as

calcium carbonate can be added to resin compositions for coating reinforcing fibers to reduce the stickiness of the fibers. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the composition of Sage by including a filler such as calcium carbonate in order to reduce stickiness of the reinforcing fibers. The amount of filler would have been obvious to determine during routine experimentation in optimizing the reduction of adherence of the coated fibers to processing equipment.

No claims are allowed.
